

Lighting Designers and Architects when planning their projects appreciate the unmistakable timeless design, state of the art engineering, and sustainable qualities of WE-EF products. As a lighting manufacturer WE-EF pay particular attention to two core responsibilities; to provide for the planners and designers the necessary 'lighting design tools' they require and second in supporting their desire to realize their unique lighting objectives. The result are projects that are recognised worldwide and illuminate, for example, the Federal Chancellor's Office in Berlin, the Staten Island September 11th Memorial on Staten Island, New York, the Sydney Opera House, the Emirates Palace Hotel in Abu Dhabi, the Formula 1 Raceway in Shanghai, the new Parliament Building of Wales, Southern Cross Station in Melbourne, or O2 Arena in London.

The encouragement and support for new talent and the international recognition and the establishment of the Profession 'Lighting Designer' is also important to WE-EF; bridging the disciplines of Architecture, Lighting and Electrical Engineering. For this reason WE-EF fully support Schools such as Wismar and seminars that encourage the professional exchange of knowledge and the further development of 'Lighting Design' and look forward to the international Light Symposium 2008 - 'future of Light and Lighting'.
